

Derma AI: Official User Guide

Document Version: 1.0

Prepared By: Shri Lakshmi Gurjar

Welcome to **Derma AI**. This comprehensive guide is designed to help you navigate our ecosystem, whether you are a patient building a new daily habit, or a clinical dermatologist managing patient telemetry.

1. Introduction

Purpose of the Platform

The Derma AI Skin Intelligence & Personalized Skincare Planner is an AI-powered platform engineered to evaluate your holistic skin health. By analyzing your physical skin condition alongside environmental factors, sleep patterns, and daily hydration, the platform generates safe, effective, and adaptive daily skincare regimens.

Who Should Use It

The platform features four distinct, secure portals tailored to specific user needs:

- **Consumers / Patients:** Individuals seeking personalized routines, ingredient safety checks, and visual progress tracking.
- **Skincare Consultants:** Estheticians and support staff needing tools to manage client profiles, monitor daily adherence, and adjust supportive regimens.
- **Dermatologists:** Medical professionals requiring clinical telemetry, secure prescription authorization (e.g., Tretinoin), and treatment response analytics.
- **System Administrators:** IT and medical directors overseeing platform analytics, credential approvals, and AI safety audits.

2. Getting Started

Account Creation and Login

1. Navigate to the DermaAI web portal.
2. Click **Create Account** to register using a secure email and password.
(Passwords are cryptographically secured using enterprise-grade hashing).
3. Upon your first login, you will be prompted to complete your baseline medical and lifestyle intake form.

Role-Based Access

Your experience is customized based on your assigned role:

- **User:** Defaults to the patient dashboard with daily checklists and routine planners.
- **Consultant & Dermatologist:** Requires administrative verification of medical credentials before gaining access to patient telemetry and clinical tools.
- **Admin:** Grants access to the global oversight console.

3. Using the Platform: Role-Specific Guides

The Derma AI platform dynamically adjusts its tools based on your account type. Please refer to the section below that matches your designated role.

3.1 For Consumers & Patients (User View)

Your dashboard focuses on your daily checklist, streaks, and upcoming routines.

- **Skin Profile Setup:** Upon initial login, navigate to the Profile tab to establish your baseline. Input your basic demographics (Age, Skin Type) and log your lifestyle factors (daily water intake, average sleep quality, environmental UV exposure).
 - *CRITICAL:* Enter any known medical allergies (e.g., nuts, specific fragrances). The AI will use this to block unsafe products from your routine.
- **Skin Assessment:** Navigate to **New Assessment** and upload a clear, well-lit photo of your face. Our PyTorch multi-modal engine will fuse your image with your lifestyle data to generate a severity score (0.0 to 5.0) for specific concerns like Acne, Redness, Open Pores, and Dark Spots.
- **Routine Planner & Product Swap:** View your structured Morning (AM) and Evening (PM) steps, distinctively badged as either " AI Formulated" or " Dermatologist Prescribed." If a suggested product is out of stock or over budget, click the **Swap icon**. The AI will instantly calculate a safe, over-the-counter alternative.
- **Product Recommendations:** The platform suggests commercial products using a strict 100-point rubric. You can filter suggestions by budget, ethical preferences (Vegan/Cruelty-Free), and specific active ingredients.

- **Ingredient Intelligence:** Use the Ingredient Scanner before buying a new product. The system will cross-reference the chemical formulation against your declared allergies and warn you of any harsh interactions (e.g., mixing AHAs with Retinoids).
- **Progress Tracking:** Use the interactive **Before/After Slider** to visually compare your baseline intake photo with your latest upload. View your **Trend Analysis** bi-axial charts, which map your 30-day routine adherence directly against your 5-Pillar Skin Health Score improvements.
- **Notifications:** Ensure push notifications are enabled on your device. The system's background scheduler will trigger automated reminders for your AM/PM routines, daily hydration goals, and product replenishment alerts.

3.2 For Skincare Consultants

Your dashboard acts as a centralized hub for managing client profiles and overseeing recommendation management.

- **Client Management:** View your patient triage lists and daily telemetry to monitor which clients need attention.
- **Reviewing Assessments:** Access and review the detailed AI-generated skin condition reports and 5-Pillar health scores for each of your assigned clients.
- **Routine Adjustments:** Suggest adjustments to supportive routines and over-the-counter products based on client feedback.
- **Monitoring Progress:** Track client adherence and visual improvement using the platform's Before/After sliders and trend analysis tools.
- **Reports:** Use the Export Hub to generate and download client progress datasets to share during consultations.

3.3 For Dermatologists (MDs)

Your highly secure clinical portal provides deep patient insights, treatment recommendation workflows, and advanced progress analytics.

- **Clinical Telemetry:** Access detailed, unmasked diagnostic reports.
 - *Note on Data Sovereignty:* Patients can use a toggle to mask their private lifestyle habits (like sleep and hydration) from clinical view, but their physical diagnostic data and severity scores will always remain visible to you for medical safety.
- **Prescription Authorization:** Provide and authorize medical-grade treatment recommendations. Any item you prescribe will be locked in the patient's routine and marked with a green "🔒 Dermatologist Prescribed" badge.
- **Treatment Analytics:** Track patient improvement trends against clinical baselines to determine if a routine is working or plateauing.
- **EMR Exports:** Click the Export Hub button to generate secure, downloadable clinical PDFs (complete with visual charts and clinic branding) for external record-keeping or Electronic Medical Record (EMR) syncing.

3.4 For System Administrators

Your global oversight console focuses on user management, platform security, and system monitoring.

- **User Management:** Manage credentials and assign/verify platform roles (e.g., reviewing and approving new Dermatologist or Consultant accounts before granting them access).

- **AI Oversight:** Access system monitoring tools and monitor recommendation workflows. You hold the authority to execute AI recommendation overrides if a safety compliance issue is flagged.
- **Platform Configuration:** Configure overarching platform settings, API limits, and parameters.
- **System Exports:** Export macro-level CSV datasets detailing system usage, platform engagement, and technical performance reports.

4. FAQs & Troubleshooting

Q: I am experiencing login issues or "Unauthorized" errors. What do I do?

A: Ensure your browser allows standard cookies. If your session expires, the system will automatically log you out for security purposes. Simply refresh the page and log in again to generate a new secure session token.

Q: How do I reset my password?

A: Use the "Forgot Password" link on the login page. If you are a clinical user (Dermatologist/Consultant), you may need to contact your System Administrator to reset your access credentials.

Q: What should I do if my AI recommendations don't load?

A: The generative clinical synthesis engine requires high processing power. If the routine planner times out or fails to load, it is likely a temporary rate limit. Wait 10-15 seconds and refresh the page to retry the generation.

5. Support & Contact

As a user-centric platform, we are committed to continuous improvement. If you encounter bugs, require technical assistance, or wish to suggest new features:

- **Email Support:** dermaai.2026@gmail.com (Monitored Mon-Fri, 9 AM - 5 PM)
